

Biosecurity Policy

M J Hunt & Son — Upper Assendon Farm, Stonor, Henley-on-Thames, Oxfordshire RG9 6HE

SBI 106227532 · CPH 33/227/0030

Document owner: James Hunt · Last reviewed: 14 September 2026 · Next review: September 2027

Purpose

This policy sets out the controls in place at Upper Assendon Farm to manage the risk of disease introduction and spread, covering incoming stock, visitors, vehicles, equipment and land management. It forms part of the farm's Health Plan alongside the annually reviewed veterinary Herd Health Plan signed by Adelle Jenkins BVSc (Larkmead Vet Group).

Incoming and returning livestock

- Bought-in or returning cattle are sourced where possible from farm-assured holdings and checked for BVD/health status before introduction.
- New or returning animals are kept separate from the main herd where practical while health status is confirmed.

TB status — current position

The herd is Officially Tuberculosis Free (OTF) and has been clear for around a year. The most recent routine test (tested by Tom) was clear a couple of weeks ago, confirmed by email. A prior restriction (20 reactors) was fully resolved and lifted. Records of test dates, results and the confirmation email are kept with the nominated vet and should be available for inspection.

Farm visitors

- All visitors with access to livestock areas sign the visitor log book kept at the farm entrance, recording name, company, date and last farm/livestock contact.
- Visitors are asked to avoid contact with livestock where they have recently visited another farm, and disinfect footwear where appropriate.

Vehicles and equipment

- Vehicles and equipment brought onto the farm by contractors (e.g. foot trimmers, AI technicians, hauliers) are visually checked and cleaned where there is a known disease risk.

Working dogs and domestic pets

Dogs on the farm are kept on a routine worming programme.

Manure, muck and soil improvers

Muck heaps and soil improvement products are stored away from watercourses and grazing land is managed with appropriate intervals after spreading, in line with the farm's nutrient management records.

Review

This policy was last reviewed on 14 September 2026, alongside the annual veterinary Health Plan review (due July 2026).
